Instant Whitening Questions & Answers

How does it work?

You place a mouth tray filled with whitening gel in your mouth, and our advanced cold blue light accelerator produces the best results available in a fraction of the time or cost of other procedures

Does it harm my teeth, gums or dental work?

No. The treatment uses a special cold light which can not burn, and special whitening gels. For people with normal, healthy teeth and gums there are no adverse effects. It does not remove tooth enamel.

How effective is it on my teeth, crowns or caps?

It removes stains caused by ageing, coffee, tea, cola, red wine, smoking etc. and reduces discolorations caused by medicines, and white spots from flouride. It also removes stains from crowns/veneers without changing their original colour. It really works!

Does it hurt?

No. For people with normal, healthy teeth and gums there is no pain and any side effects are temporary and will disappear quickly.

How long will the whitening last?

Depending on your lifestyle and dental hygiene it is possible to maintain your whiter teeth for 2 years

How long after the treatment before I can eat/drink?

For 24 hours after the treatment you should avoid tea, coffee, cola drinks, red wine, smoking, or consuming anything that could stain your teeth. If it stains a white shirt, it could stain your teeth!

Why choose Pro Teeth Whitening?

- Premier supplier to Pharmacies
- Locations Australia wide
- Professional strength, quality products
- Range of products to suit your needs
- Products and Services in Pharmacy, Beauty Industry, Dental Industry & Mobile
- Australian owned & operated
